**2014** This book discusses Hong Kong's use of onscreen marking (OSM) in public examinations. Given that Hong Kong leads the way in OSM innovation, this book has arisen from a recognised need to provide a comprehensive, coherent account of the findings of various separate but linked validation studies of onscreen public examinations in Hong Kong. The authors discuss their experience of the validation process, demonstrating how high-stakes innovation should be fully validated by a series of research studies in order to satisfy key stakeholders.

The book is a must read for policy makers, academics, university administrators and post graduate research students in the

broad field of education and in higher education studies in particular. The book brings together a wealth of information regarding the imperatives of transformation in Africa's higher education systems. Not only do some of the chapters provide critical discussion about the conceptualisation of transformation, the majority of the chapters reflect on empirical evidence for transformation in diverse fields of mathematics, science, gender, the training of doctoral students and the governance and management of universities. This central theme of sustainable change and reform runs across the chapters of the book. For students, the book provides exemplars of practical research in higher education. For scholars in higher education and policy makers, specific issues for reform are identified and discussed.

Drawing on a large body of empirical evidence, former Harvard President Derek Bok examines how much progress college students actually make toward widely accepted goals of undergraduate education. His conclusions are sobering. Although most students make gains in many important respects, they improve much less than they should in such important areas as writing, critical thinking, quantitative skills, and moral reasoning. Large majorities of college seniors do not feel that they have made substantial progress in speaking a foreign language, acquiring cultural and aesthetic interests, or learning what they need to know to become active and informed citizens. Overall, despite their vastly increased resources, more powerful technology, and hundreds of new courses, colleges cannot be confident that students

2014  
are learning more than they did fifty years ago. Looking further, Bok finds that many important college courses are left to the least experienced teachers and that most professors continue to teach in ways that have proven to be less effective than other available methods. In reviewing their educational programs, however, faculties typically ignore this evidence. Instead, they spend most of their time discussing what courses to require, although the lasting impact of college will almost certainly depend much more on how the courses are taught. In his final chapter, Bok describes the changes that faculties and academic leaders can make to help students accomplish more. Without ignoring the contributions that America's colleges have made, Bok delivers a powerful critique--one that educators will ignore at their peril.
