<div><div><div><div><div><div></div></div></div><div>In this extraordinary fiction debut—rich with love and betrayal, history and intellectual passion—two remarkable narratives converge on Easter Island, one of the most remote places in the world. It is 1913. Elsa Pendleton travels from England to Easter Island with her husband, an anthropologist sent by the Royal Geographical Society to study the colossal moai statues, and her younger sister. What begins as familial duty for Elsa becomes a grand adventure; on Easter Island she discovers her true calling. But, out of contact with the outside world, she is unaware that World War I has been declared and that a German naval squadron, fleeing the British across the South Pacific, is heading toward the island she now considers home. Sixty years later, Dr. Greer Farraday, an American botanist, travels to Easter Island to research the island’s ancient pollen, but more important, to put back the pieces of her life after the death of her husband. A series of brilliant revelations brings to life the parallel quests of these two intrepid young women as they delve into the centuries-old mysteries of Easter Island. Slowly unearthing the island’s haunting past, they are forced to confront turbulent discoveries about themselves and the people they love, changing their lives forever. Easter Island is a tour de force of storytelling that will establish Jennifer Vanderbes as one of the most gifted writers of her generation.</div></div></div></div>

<div><div><div><div><div><div></div></div></div><div>Easter Island, or Rapa Nui as it is known to its inhabitants, is located in the Pacific Ocean, 3600 kilometres west of South America. Annexed by Chile in 1888, the island has been a source of fascination for the world beyond the island since the first visit by Europeans in 1722 due to its intriguing statues and complex history. Inventing 'Easter Island' examines narrative strategies and visual conventions in the discursive construction of 'Easter Island' as distinct from the native conception of 'Rapa Nui'. It looks at the geographic imaginary that pervaded the eighteenth century, a period of overwhelming imperial expansion. Beverley Haun begins with a discussion of forces that shaped the European version of island culture and goes on to consider the representation of that culture in the form of explorer texts and illustrations, as well as more recent texts and images in comic books and kitsch from off the island. Throughout, 'Easter Island' is used as a case study of the impact of imperialism on the view of a culture from outside. The study hinges on three key points - an inquiry into the formation of 'Easter Island' as a subject; an examination of how the constructed space and culture have been shaped, reshaped, and represented in discursive spaces; and a discussion of cultural memory and how the constraints of foreign texts and images have shaped thought and action about 'Easter Island.' Richly illustrated and unique in its findings, Inventing 'Easter Island' will appeal to cultural theorists, anthropologists, educators, and anyone interested in the history of the South Pacific.</div></div></div></div>

<div><div><div><div><div><div></div></div></div><div>Easter Island (Rapanui) is the most remote inhabited island in the Pacific Ocean and the easternmost in Oceania. Much has been written on the origin of its first inhabitants and the enormous stone statues they carved and erected, but little exists on the island’s biota. Knowing that very few species of fishes had been reported for Easter Island, John Randall went there in 1969, with the support of the National Geographic Society, to study the fish fauna. He was joined during revisits in 1988 and 1989 by the island’s medical doctor, Alfredo Cea. They published the Rapanui names of fishes in 1984. The total number of Easter Island shore fishes to a depth of 200 meters is only 139 species. However, an astounding 21.7 percent are known only from the island, second only to the Hawaiian Islands in the percentage of endemic fishes. Forty-four new species of fishes have been described, of which 25 are in scientific papers by Randall or by Randall and coauthors. Shore Fishes of Easter Island puts all of these fishes in one beautifully illustrated book with introductory chapters (Historical Review, Zoogeography, Marine Conservation, Materials and Methods).</div></div></div></div>
